

Automated Enterprise Behavior Analysis

Discover thought leaders and informal collaborative groups in your organization with a plug-n-play network appliance.

Included are industry standard Social Network Analysis (SNA) stats, such as:

- **Betweenness** - The degree an individual lies between the communication paths of others.
- **Centrality Closeness** - Represents how close individuals are to the center of the organization's network.
- **Centrality Degree** - The Number of connections an individual has to others in the organization

With MetronEBA, you can compare social network interactions from different time frames to measure the effectiveness of business process reengineering (BPR) and organizational changes.

MetronEBA enables you to:

- Discover key employees and informal collaborative groups
- Optimize collaboration by identifying silos and eliminating bottlenecks
- Perform differential analysis on social networks from an easy-to-use executive-level dashboard
- Automatically collect SNA data in real time
- Export SNA data to third-party SNA tools, including Orgnet's InFlow

"eTelemetry already offers a self-contained box that can be attached to a corporate network to trace an organization's electronic communications and map out a network analysis chart that shows which individuals in the organization serve as the hubs or linchpins between different groups."
