

INTRODUCTION

Serving our clients and their communities for our 120th year, Hardesty & Hanover, LLP is widely recognized for its industry leadership and expertise. Offering services that span the engineering spectrum—from complex movable and fixed bridges, to stadium structures and power systems—Hardesty & Hanover is equipped to address the unique requirements of any project, irrespective of size and scope.

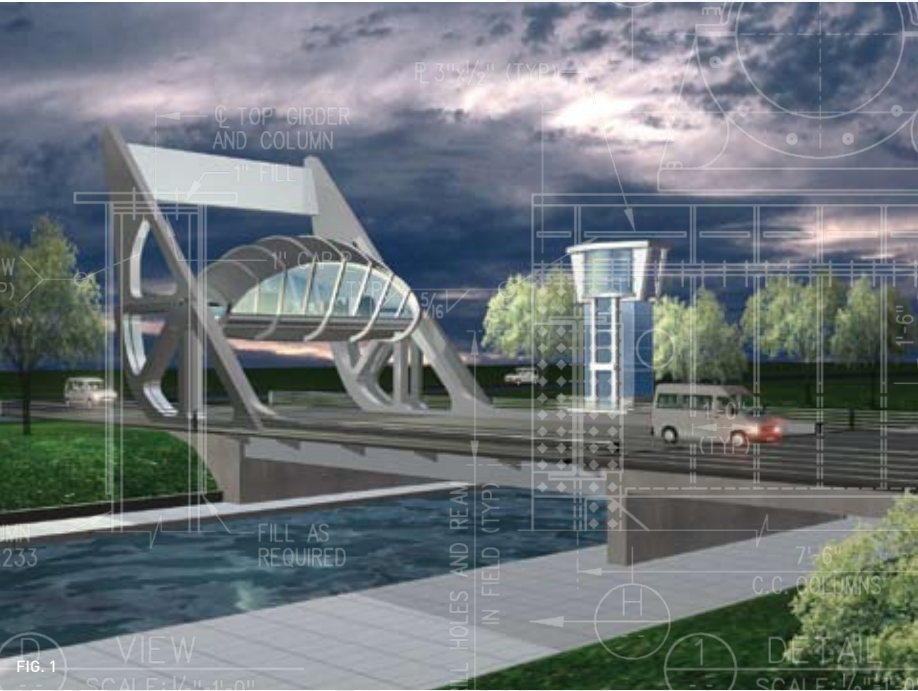

With our local presence—and global reach—we are providing our clients solutions to their most complex infrastructure issues. We invite you to see where we plan to go with our next 120 years, what we are doing today to get us there, and how our last 120 years has prepared us to best serve you well into the future.

OUR FUTURE

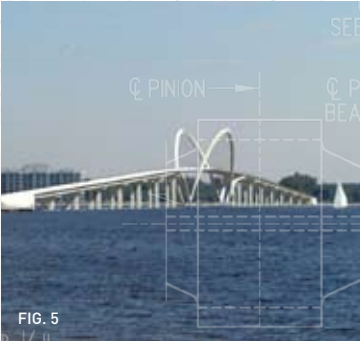

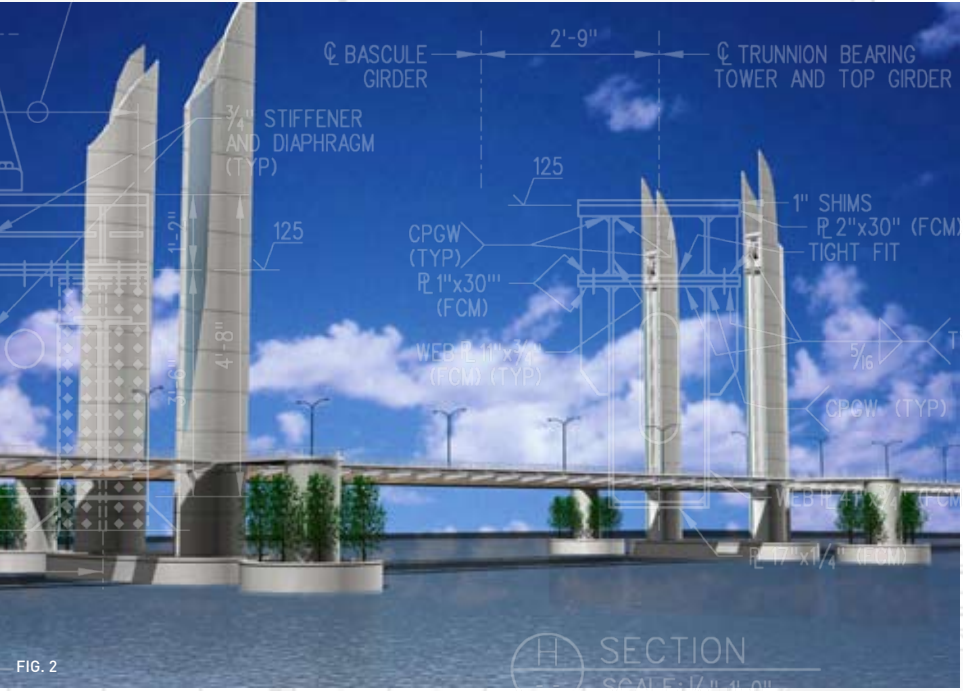

We will in the future, as we have in the past, always seek to expand the services we provide our current clients. Having served the bulk of our present client base for well in excess of fifty years, we will look to continue anticipating their needs for the next fifty years. Your repeated trust, sincerely appreciated and doggedly earned, is our most prolific motivator.

Our future, like that of our clients, takes a global perspective. We will grow our international practice while we expand our geographical footprint across the country and around the globe. Eleven offices today will become twenty and thirty and more—because we believe the best way to serve our clients is to sit next to them, understand their unique challenges and forge solutions together. We believe in partnership; our team is an extension of yours.

In that spirit, we also believe that people are the single most valuable asset to any organization. We will not stray from that which has shown us 120 years of success: to recruit and retain the best possible talent in the engineering community; to provide unmatched mentoring and training opportunities; and to grow each individual member of our outstanding team. Expanding on these values which have shown us tremendous success in the past will help us realize our clients' visions in the future: just as we have grown our mechanical and electrical disciplines to among the largest specialty practices in the nation, so too shall we grow our highway, power systems and bridge inspection disciplines in the years and decades to come.

OUR PRESENT

Hardesty & Hanover has built on its legacy of providing first-rate consulting services to the largest, most distinguished public and private entities. World-renowned as the preeminent engineers of heavy movable structures, we are proud to see our sphere expand to include the design and rehabilitation of complex fixed bridges, power systems and stadiums.

Drawing on our vast experience, we help our clients realize increased life and productivity of their infrastructure assets. Whether our design teams are helping the home of a new stadium see their investment operational 365 days a year, or our field staff is providing inspection services that ensure the safety of the traveling public, Hardesty & Hanover’s expertise directly benefits you. We leverage innovation and time-tested fundamentals; we think creatively and act responsibly; we combine the science of engineering with the art of design.

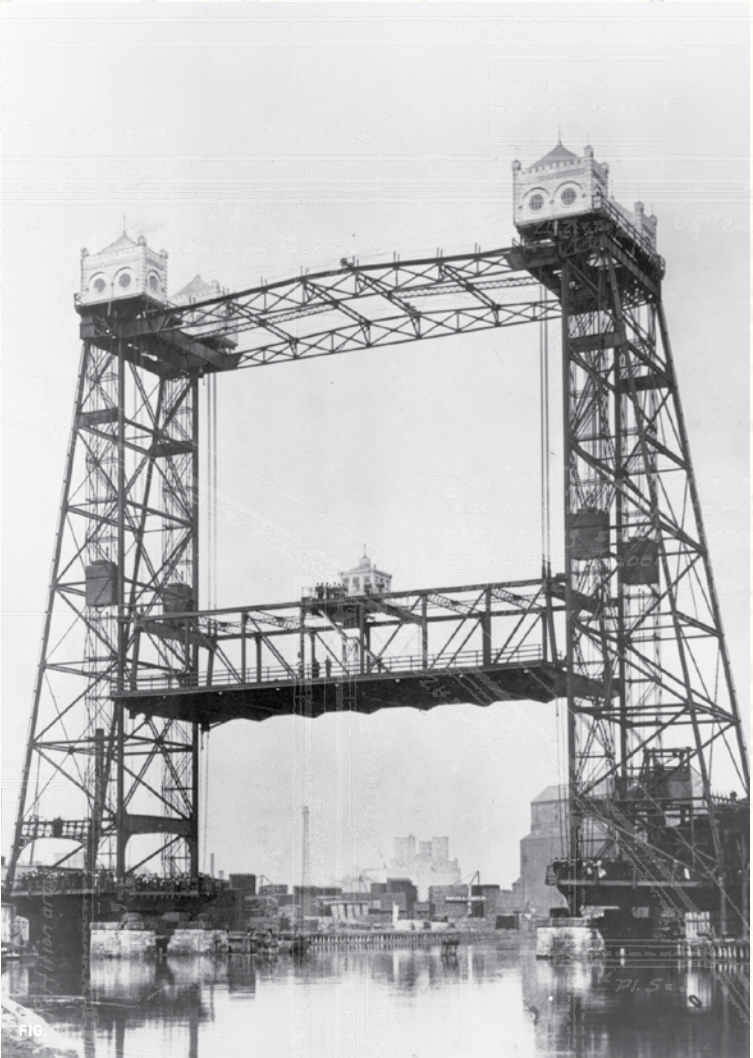

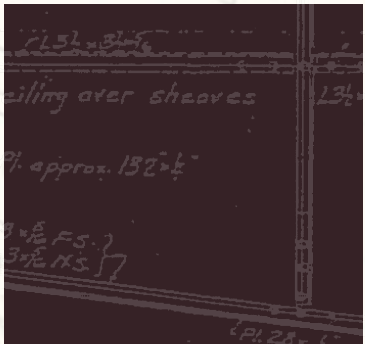

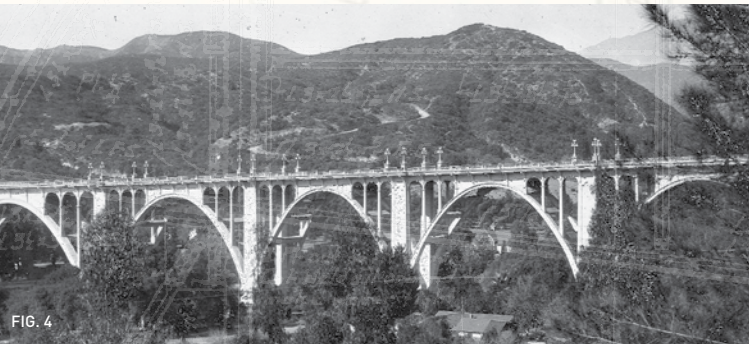

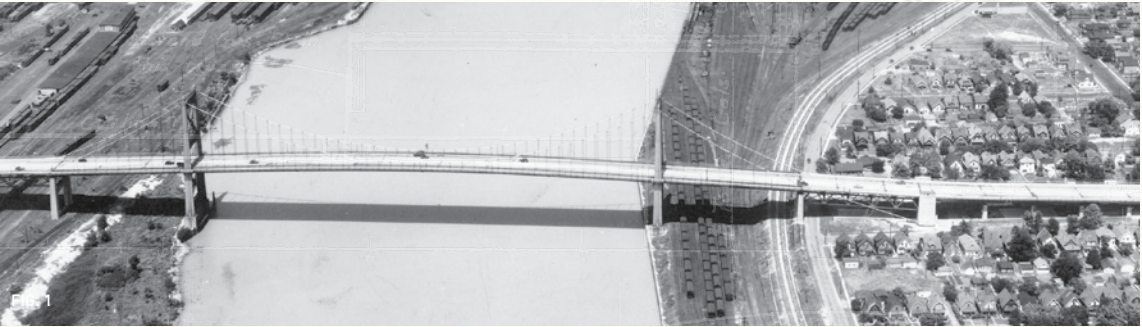

Each part, when assembled into our finely-tuned machine, is aimed at a single goal: helping you to improve the lives of those you serve.

OUR PAST

Originally established in 1887 by Dr. J.A.L. Waddell, Hardesty & Hanover has been and continues to be a firm owned and operated by professional engineers. As the original patent holder on the first vertical lift bridge design, our founding father laid the groundwork for the firm to grow and mature into the distinguished international enterprise we are today.

On each new engagement we bring to bear expertise amassed over twelve decades of service to our communities. From our first project in 1890 to our design of the 1938 and 1964 World's Fair monuments to our current projects spanning six continents, Hardesty & Hanover continues to build on the legacy established so long ago while contributing as the “noted voice” to what we view as the most satisfying profession of all.

OUTRODUCTION

ENGINEERING

“There is no doubt in my mind about it, ours is the most satisfying profession of them all, not withstanding its numerous physical hardships, its grave responsibilities, and its exacting demands on one’s time and energies. Never once since graduation...would I have considered changing the profession of my choice, and never once have I regretted that choice.”

J.A.L. Waddell

Founder

EXPERIENCE

“Experience is the foundation from which success can rise, and we have always measured success by the satisfaction of our clients. The stalwart underpinnings we enjoy today—earned over the last century—will benefit our clients in the next”

Bernard Haber

Retired Partner

DETAIL

“The cornerstone of any truly successful engagement is the attention paid to detail. By applying this compelling precept universally—not only to the services we directly provide our clients, but also to our internal operations—we can be assured of providing a complete and positive service experience. Our ultimate objective has always been, and remains today, total client satisfaction.

Charles J. Gozdziwski

Partner & Chief Executive Officer

DESIGN

“The application of sound, time-tested engineering principles, when combined with industrious spirit and innovative drive, enables our firm to provide remarkable solutions to our clients’ most complex engineering issues. It is through the seamless integration of these three key ingredients that we can remain the industry leader.

Andrew C. Coates

Partner & Chief Technical Officer

ENDURING

“Building upon the experience and success of those who came before us, we must continue to exceed our clients’ expectations now and in the future. It is by leveraging the skills of our vastly talented, deeply committed staff that we will attain the best means to achieve such an important end.”

Paul M. Skelton

Partner & Chief Development Officer
